The diagram illustrates the internal structure of a lithium-ion battery. On the left is a solid cylindrical battery. On the right is a cross-sectional view of the battery, revealing the following components from the outside in:

- steel-plated positive cover**: The outermost protective layer.
- polyethylene (PE) layer**: A layer below the positive cover.
- steel case (bonded die)**: The main structural housing.
- separator (polyethylene film)**: The layer separating the positive and negative electrodes.
- negative electrode (graphite)**: The innermost layer on the right side.
- metal spacer**: A component at the bottom of the negative electrode.
- metal washer**: A component at the bottom of the positive electrode.
- current collector (brass)**: The central conductive part.
- cathode (manganese dioxide)**: The positive electrode material.
- anode (carbon)**: The negative electrode material.
- inner steel cover (steel)**: A layer at the bottom of the positive electrode.
- steel-plated negative cover**: The bottom-most protective layer.
- crank flange**: A component at the very bottom.
